By Martha Liberto
GES Teacher

Kindergarten students from Mrs. Amanda Moorman's class recently received a visit from Grenada County Soil and Water Conservation's "Sammy Soil" and Mrs. Japhia Williams. Students were able to learn about the soil profile, or different layers of topsoil and subsoil, using edibles like coconut, cookie crumbs, gummy worms, pudding, and candies.

Sammy Soil, played by Mr. Lee Clark, showed off his layers, as the students created their "soil" snacks. Williams described the purpose of the lesson,

"We want these young students to know the importance of conserving natural resources. With Sammy Soil they see several benefits from taking care of our land. The edible soil cups are a really fun way to see the layers of soil, made by their own hands."

The students learned about how soil affects people, plants, and animals. Teacher Amanda Moorman explained, "My students loved having a visit from Sammy Soil, since we had seen him in the Soil and Conservation coloring book. My young students are hands-on learners, so the edible soil activity was a huge hit!"
